THE EDGAR CAYCE HEALTH DATABASE

ACID-FORMING & ALKALINE-FORMING FOODS

It must be noted that because a food is acid it is no indication that it REMAINS acid in the body. It can turn alkaline. Honey and raw sugars produce alkaline ash, but because of a high concentrate of sugar become acid-formers. Those fruits marked with an * should not be eaten with other foods. They are acid externally but alkaline internally.

ALKALINE FRUITS

- ▶ Apples/cider
- ▶ Apricots
- ▶ Avocados
- ▶ Bananas
- ▶ Berries (most)
- ▶ Cantaloupe
- ▶ Carob (pod only)
- ▶ Cherries
